

Refurbish, enhance, protect, create. All in one.

AuraFlex™ is a practical solution for protecting surfaces from wear and tear, quickly rejuvenating old ones and all with creative freedom.

AuraFlex™ is a sub-surface printed laminate with excellent abrasion characteristics. It can be printed with photographic images or more generic patterned designs. From a creative point of view, it has endless possibilities

From a practical perspective, it's not just used to decorate, but to protect surfaces by providing a hard-wearing finish that also has graffiti resistant properties.

It can be used for table tops, vestibule walls and other interior panels, where scratching and knocks from luggage can cause damage. It's perfect for high-traffic areas that need to stand-up to constant use.

Using high performance dry adhesives, AuraFlex is quick and clean. It can be applied on-site or as part of a manufacturing process. Our core variant has full fire testing and a proven track record on underground and overground rolling-stock.

Its cost, quick installation and durability make it an attractive material for interior refurbishment and enhancement.

Key features

- Encapsulated graphics. Screen or digitally printed to almost any pattern or design.
- Highly durable surface-finish offers extended performance for internal applications.
- Out performs traditional laminates for abrasion resistance.
- Can significantly reduce project costs and downtime. Easily applied on-site and easy to maintain.
- Wide range of finishes and grades to meet all requirements.
- Can be applied to most smooth non-porous surfaces and accommodate simple curves.
- Meets all relevant rail fire safety standards.
